Subject: Parcel B-13 Naphthalene Delineation Work Plan
Attachments: Parcel B13 Slag - Additional Characterization Work Plan 01-22-20.pdf

All,

Attached please find the Parcel B-13 Naphthalene Delineation Work Plan. This document lays out our proposed approach to delineate the elevated levels of Naphthalene that were discovered within Parcel B-13 during slag reclamation activities in 2019. Hard copies of the work plan were prepared and sent out this week. If anyone has questions or would like to discuss this work plan in more detail, please feel free to contact me directly.

Thanks
James
